OBJECTIVE	Find practical industry experience towards a career as a computer scientist and molecular geneticist.		
INTERESTS	<ul style="list-style-type: none"><li>▪ Operating systems and compiler development, particularly for high-performance supercomputers and constrained embedded systems.</li><li>▪ The applications of such systems in scientific research, particularly at the intersection of bioinformatics and machine learning.</li></ul>		
EDUCATION	<b>University of Illinois at Urbana-Champaign</b> , Urbana, Illinois, USA		
	<ul style="list-style-type: none"><li>▪ B.S. in Computer Science + Chemistry</li><li>• Cumulative GPA: 3.94</li></ul>	Aug 2018 – May 2022 (Expected)	
WORK EXPERIENCE	<b>CS 125: Introduction to Computer Science</b>		
	<ul style="list-style-type: none"><li>▪ Course Developer</li><li>• Developed jtrace, a JVM native agent that traces program state, and java-complexity, a static code analysis tool that calculates cyclomatic complexity. Used to gather data on student homework submissions.</li><li>• Worked on janini, an online Java execution platform designed for educational use.</li><li>• Held ~4 office hours per week to help students with assignments and answer questions.</li></ul>	Jan 2019 – May 2019	
	<ul style="list-style-type: none"><li>▪ Office Hour Captain</li><li>• Helped coordinate office hours for a class of ~900 students and ~100 Course Assistants.</li><li>• Held ~10 office hours per week to help students with assignments and answer questions.</li><li>• Organized and conducted Course Assistant Training to make office hours more effective and efficient.</li></ul>	Aug 2019 – Present	
PROJECTS	<ul style="list-style-type: none"><li>▪ <b>Silk</b>: Compiled systems programming language <span style="float: right;">Spring 2019</span><ul style="list-style-type: none"><li>• C-like semantics with additional safety guarantees and a sophisticated type system.</li><li>• Features parametric polymorphism (generics) and simple, modern syntax.</li><li>• Leverages the portability and powerful optimization of the LLVM platform.</li></ul></li><li>▪ <b>Mako</b>: Operating System for 32-bit x86 computers <span style="float: right;">Summer 2019</span><ul style="list-style-type: none"><li>• Supports a Linux-compatible ext2 filesystem, pre-emptive and cooperative multitasking, graphical user interface and much more.</li><li>• Developed in approximately six months entirely from scratch.</li></ul></li><li>▪ <b>thorin</b>: debugger for C programs on Linux and macOS <span style="float: right;">Spring 2019</span><ul style="list-style-type: none"><li>• Traces debuggee using ptrace (linux) or mach ports (macOS) and reads DWARF-formatted debug information</li><li>• Provides GDB-like state-inspection features.</li><li>• Implemented in Rust and C.</li></ul></li><li>▪ <b>Golisp</b>: Interpreted, general purpose lisp-like programming language <span style="float: right;">Fall 2018</span><ul style="list-style-type: none"><li>• Implemented entirely in Go and itself.</li><li>• Features a standard library that provides file I/O routines and an extensible module system.</li><li>• Functional purity and Go runtime make it a good fit for concurrent applications.</li></ul></li><li>▪ <b>trash-detector</b>: 36-hour hackathon project developed with two teammates <span style="float: right;">Spring 2019</span><ul style="list-style-type: none"><li>• Convolutional neural network that detects trash (plastic bottles, crushed cans, etc.) in images.</li><li>• Gathered data manually (because of a lack of comprehensive trash datasets) to train network.</li><li>• Connected the neural network to a web backend and exposed an API to scan and highlight trash in images.</li></ul></li><li>▪ Many more open source projects.</li></ul>		
SKILLS	<b>OS Development and Systems Programming</b> <ul style="list-style-type: none"><li>▪ Proficient in languages suited for high-performance computing: C, Rust, C++ and Go.</li><li>▪ Familiar with the x86 architecture: memory virtualization, context switching mechanisms, interrupt handling etc.</li><li>▪ Experience writing system software for linux and macOS.</li><li>▪ Experience developing a multi-tasking operating system kernel capable of hosting user programs and interfacing with common hardware devices.</li></ul> <b>Programming Languages</b> <ul style="list-style-type: none"><li>▪ Experience designing and implementing a general-purpose interpreted programming language from scratch.<ul style="list-style-type: none"><li>• Working with ANTLR and yacc LALR(1) and LR(1) grammars, and implementing a parser by hand.</li></ul></li><li>▪ Experience designing and implementing a systems programming language and compiler frontend for the LLVM platform.</li></ul>
